

ALOK SRIVASTAVA

Open Source Contributor | Full-Stack Developer | Computer Science Undergraduate

alok020505@gmail.com | github.com/GuTS805 | linkedin.com/in/alok-srivastava

SUMMARY

Full-stack developer with hands-on experience building and shipping production-oriented web applications using Next.js, TypeScript, React, and Supabase. Strong foundation in Data Structures & Algorithms (C++), realtime systems, authentication, and REST API design. Active open-source contributor to JoinMarket (Bitcoin privacy wallet) and AnkiDroid, with two published security advisories to date. Seeking a Software Engineering internship to contribute to scalable, real-world engineering teams.

EXPERIENCE

Open Source Contributor — JoinMarket (Bitcoin) & AnkiDroid

Aug 2026 – Present

- Improved keyboard accessibility across the Bitcoin privacy wallet UI (joinmarket-webui/JAM), closing accessibility gaps flagged in review.
- Redesigned UTXO selection and freeze/unfreeze transaction workflows in JoinMarket NG, reducing failed or stuck transactions for privacy-focused Bitcoin users.
- Discovered and patched a proxy-environment-mutation vulnerability in JoinMarket NG; fix shipped as a published security advisory protecting the wallet's user base.
- Improved screen-reader accessibility and authored regression tests in AnkiDroid, meaningfully raising test coverage.
- Discovered and patched an unauthorized-microphone-access vulnerability in AnkiDroid; fix shipped as a second published security advisory.

Independent Full-Stack Developer — Personal Projects

Remote

- Designed, built, and shipped 3 production-oriented full-stack applications spanning social networking, realtime multiplayer, and AI-powered EdTech (see Projects).

TECHNICAL SKILLS

Languages: C++, JavaScript (ES6+), TypeScript, Bash, HTML5, CSS3

Currently Learning: Rust, Kotlin

Frontend & Backend: React.js, Next.js (App Router), Tailwind CSS, Zustand, Leaflet, Node.js, Express.js, REST APIs, JWT

Databases & Cloud: PostgreSQL, Supabase, MongoDB, Firebase Firestore, Vercel

Testing & Quality: Vitest, Robolectric, mutation testing, doctests, regression test design, Web Accessibility (WCAG/ARIA), CI/CD workflows

AI & Tools: Google Gemini API, Vapi AI, Judge0 API, Git, GitHub, Postman

PROJECTS

Hangr — Hyperlocal Social Networking Platform

Next.js, TypeScript, Supabase, Zustand, Leaflet

- Engineered a hyperlocal social platform letting users discover others nearby by shared interests via Leaflet-based geolocation, with a guided onboarding flow that improved profile-completion rates.
- Built realtime group chat and a community feed on Supabase Realtime + PostgreSQL, with verified-location map markers.
- Designed a Ping system and trust-score algorithm to reduce fake-profile signups and improve match authenticity.

MindMash — Real-Time Coding Battle Platform

React, Node.js, Express.js, MongoDB, Socket.IO, Judge0, JWT

- Built a real-time multiplayer coding battle platform running sandboxed, multi-language code execution via the Judge0 engine.
- Implemented JWT authentication and room-based session isolation, with Socket.IO broadcasting live results to all players in real time.
- Integrated the Monaco Editor (VS Code's editor engine) for syntax highlighting, autocomplete, and multi-language support, improving the in-battle coding experience.

GyanSetu — AI-Powered Gamified Learning Platform

Next.js, TypeScript, Firebase, Gemini API, Vapi AI

- Built an AI-powered EdTech platform with role-based access for students and teachers; Gemini auto-generates quizzes and Vapi AI powers voice-based interaction, cutting manual quiz-creation effort.
- Built a gamification layer — leaderboards, XP tracking, achievement badges — with responsive dashboards to boost student engagement.

EDUCATION

ABES Engineering College — B.Tech, Computer Science & Engineering

Expected Graduation: 2028
